

ABSTRACT OF THE DISCLOSURE

A system and method for creating a series of individualized custom doses for a consumer. The individualized doses being delivered in a package or packages, such that each individualized custom dose, comprising a plurality of medications and/or supplements, is individually separable from the remaining doses within the series. By way of example, and not of limitation, a system is described having a web based front-end interface within which the user may establish a dosing schedule, select supplements and/or medications (MS) from an MS database, elect which MS are to be included in each dose, and communicate the order to be processed by a packetizing system. The packetizing system utilizes a conveyance device which interconnects a series of pill dispensing bins. The conveyance device has compartments for collecting a series of doses which are then packetized and shipped for use by the consumer.
